

Authentication and Identification for the Smallest IoT Devices

Award Winning Security for IoT Designs

Veridify Security, provides fast, small footprint, ultra-low-energy, and quantum-resistant authentication and data protection solutions for low resource IoT devices.

Up to 45x Faster Than Other Methods

We provide security solutions for device-to-device communication, authentication, and identification; including secure boot and secure firmware update functions. Our methods run up to 45x faster than current solutions.

Compact Enough to Fit on the Smallest Processors

Our key agreement protocols and digital signature algorithms feature low RAM and ROM requirements and fit even the smallest 8, 16, and 32-bit processors.

Easy to Implement

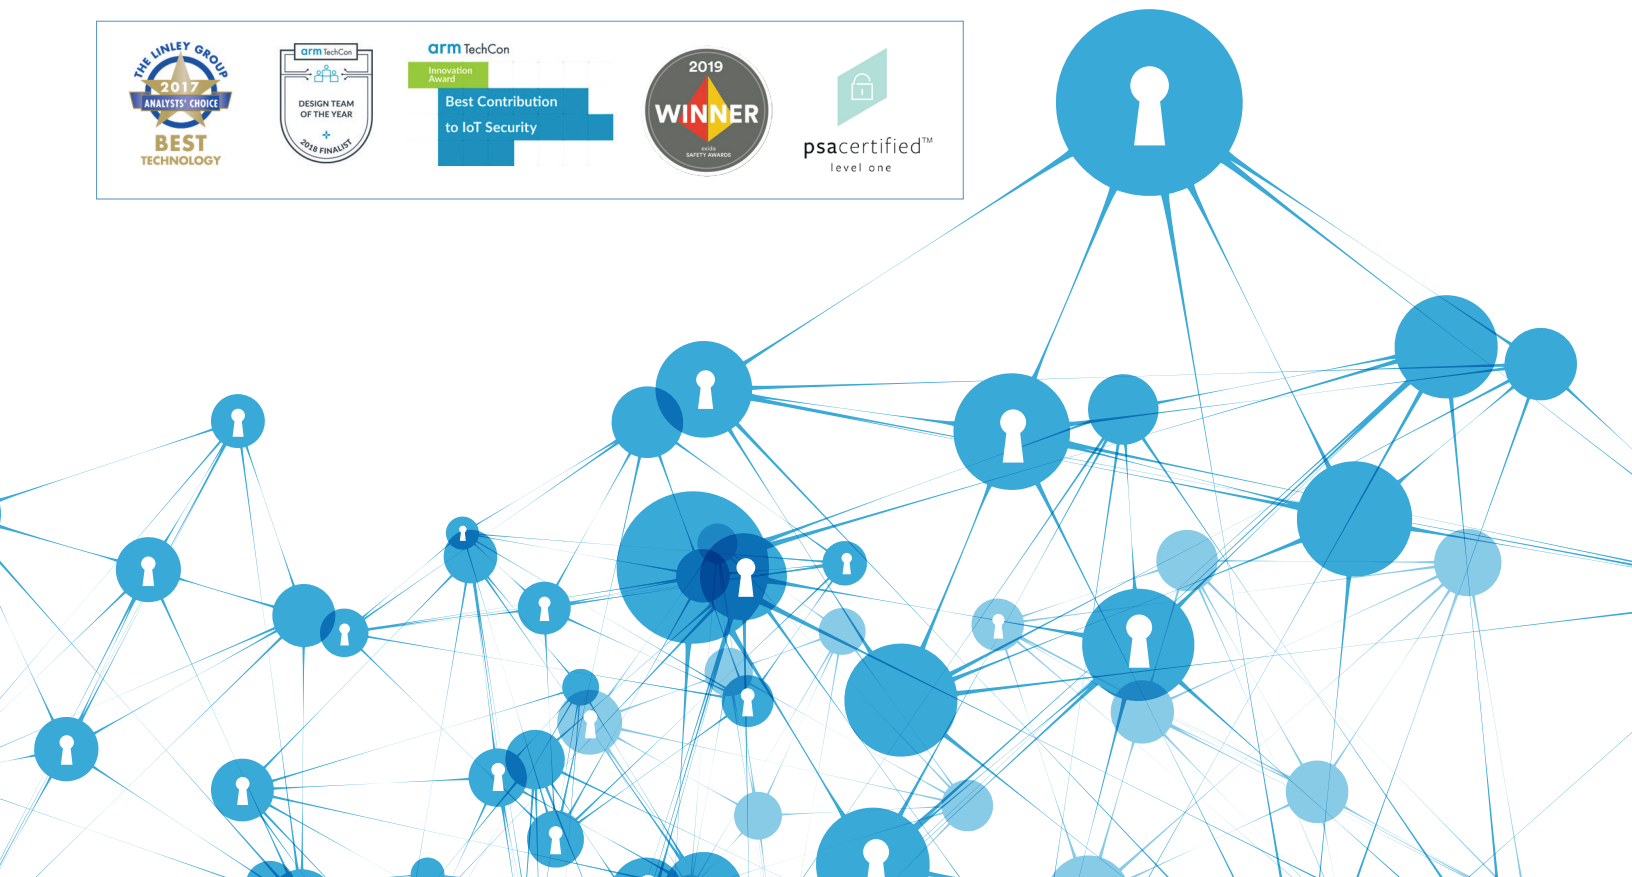

While most current security technology requires costly and time-consuming hardware implementations or accelerators to achieve satisfactory execution, our methods can be deployed in software, with great performance, on a wide range of processors.

Future-Proof

Devices expected to be in the field for ten years or more will likely be vulnerable to threats from algorithms that will run on larger quantum computers. All our methods are quantum-resistant against all known attacks.

Markets and Applications

Our methods are ideally suited for a broad range of markets including IoT, smart grid, automotive, medical devices and more.

Veridify provides fast, small footprint, ultra-low-energy, and quantum-resistant authentication and data protection solutions for MCU, CPU, ASIC, FPGA devices and the 8-, 16-, and 32-bit IoT endpoints they connect to.

Authenticate up to 45x Faster Than Other Methods

Our ultra-lightweight protocols, Walnut Digital Signature Algorithm™ (WalnutDSA™) and Ironwood Key Agreement Protocol™ (Ironwood KAP™), enable rapid and secure authentication of sensors, actuators, and other highly constrained devices.

- WalnutDSA™ - Verifies integrity and source authentication of digital data.
- Ironwood KAP™ - A Diffie-Hellman-like key agreement protocol that enables two parties to generate a shared secret over an open channel without any prior communication.

DOMETM: A Device Ownership Management and EnrollmentTM Platform

DOMETM provides a comprehensive device provisioning and ownership platform that simplifies security, management and provisioning of IoT devices in the field without needing a pervasive cloud or network connection. DOME enables a truly scalable platform that consolidates security functions and reduces costs and complexity for device owners.

Post-Quantum Ready

Quantum computers will become powerful enough to break popular security methods like ECC and RSA. Veridify's cryptography is resistant to all known quantum attacks making your solutions future-proof today.

ISO 26262 ASIL D Certified

Our software development methods conform with the strictest requirements and are Automotive Safety Integrity Level (ASIL) D certified, the highest classification for safety-critical processes.

Example Use Case - Industrial IoT

Veridify ensures firmware on an industrial device has not been modified. Here, an MCU running Veridify methods can validate firmware that has been signed by a trusted party. Veridify enables these functions to be delivered in software, which performs faster, uses less energy and is resistant to quantum attacks.

Markets

- Automotive
- Industrial IoT
- Transportation
- Healthcare
- Energy/Smart Grid
- Payments

Applications / Security Functions

- Authentication
- Identification
- Data Protection
- Secure Boot
- Secure Firmware Update
- Command Validation

Faster Execution

| | ARM Cortex M0 |
|-----------------------------|------------------|
| Test Platform | Infineon 2Go-V1 |
| Clock Speed | 32 MHz |
| Ironwood Runtime | 13.78 ms |
| ECDH Runtime | 641.80 ms |
| Ironwood Improvement | 46.6x |

Smaller Footprint

| | ARM Cortex M0 |
|-----------------------------|-----------------|
| Test Platform | Infineon 2Go-V1 |
| Ironwood - ROM | 1,760 bytes |
| ECDH - ROM | 9,660 bytes |
| Ironwood Improvement | 5.5x |
| Ironwood - RAM | 508 bytes |
| ECDH - RAM | 836 bytes |
| Ironwood Improvement | 1.6x |
